

TEMPLETON BOARD OF HEALTH DURING A PANDEMIC FLU

Isolate the ill person *WITHIN* your home.

- The person who is ill should not leave the house unless they are being taken to a medical appointment. The sick person will have to stay home for two weeks after their symptoms begin, even if they are feeling better. Do not have visitors while the person is sick.
- Designate a room(s) only for the ill person(s) so they are separated from other household members. The room(s) should have a door that can be closed.
- The ill person should wear a protective mask when anyone is in the room or car. People in the room or car with the ill person should also wear a protective mask. Disposable gloves should be used when cleaning or disinfecting any room or area where the sick person has been.

Wash hands with soap or use alcohol-based hand rubs.

- Everyone in the household – and it is important to remind children – should wash their hands with soap between contacts with other, before preparing food, and before eating.
- Wash hands after touching tissues or surfaces soiled with saliva or nose drainage.

Keep the household environment clean.

- On a daily basis, clean surfaces and commonly shared items like microwaves, refrigerator handles, phones, remote controls, doorknobs and handles, toilet seats and handles, faucets, light switches and toys. Use a labeled household disinfectant or chlorine bleach mixture.
- Store brand chlorine bleach can be used as a disinfectant by mixing $\frac{1}{4}$ cup chlorine bleach with 1 gallon cool water.

Cover noses and mouths when sneezing or coughing.

- Remind children and others to cover their noses and mouths with a tissue when sneezing or coughing, or to sneeze or cough into their sleeves. Put used tissues in a wastebasket, and then wash hands with soap or use an alcohol-based rub.
- Even when a person is wearing a mask, they should cough or sneeze into their sleeve.

Watch all household members for symptoms of respiratory illness.

- Contact your healthcare provider if a fever or other symptoms such as chills, cough, sore throat, headache, or muscle aches develop.

Make sure supplies are on hand.

- Keep supplies of masks, gloves, soap, tissues, paper towels and cleaning supplies on hand.
- Make sure all sinks and restrooms are stocked with soap and paper towels.
- Make sure that tissues are available in all bedrooms and common areas like living, dining, family, and computer rooms.

During a pandemic flu, it will be important NOT to go to the hospital except in the case of a medical emergency. Hospitals will be overwhelmed with patients during a pandemic and many sick people may have to be cared for at home or at a non-hospital location.
